

Warning

- This unit is equipped with an override for the reverse speed limiter.
- Failure to comply with proper use of the Speed Limiter Override can cause instability and loss of control of the ATV resulting in accidents causing Injury or Death.
- In cases where ATV operation in the reverse direction requires increased speed or power, (moving a heavy load on a trailer or backing up a grade), the override can be activated.
- Engaging the override will suspend operation of the reverse speed limiter for as long as the override switch is depressed.
- Never attempt to defeat the operation of the Speed Limiter other than during temporary use under controlled operation of the ATV.
- The override switch is located on the left handlebar switch assembly. Directly behind the switch is the label “OVERRIDE”.
