

## Horn Installation

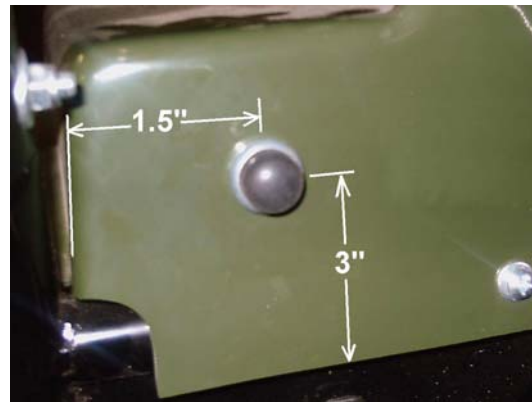

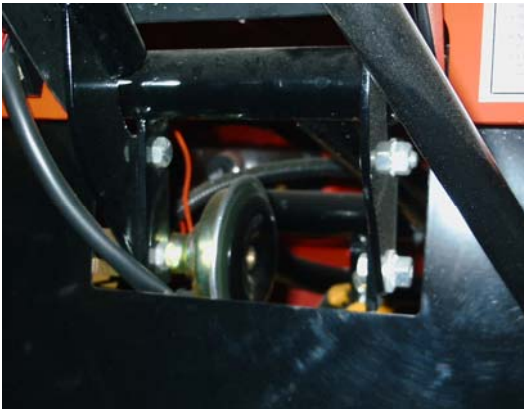

### Contents:

- 1 – horn
- 1 – wire harness
- 1 – button switch
- 2 screws, nut and button
- 4 – zip ties

### Tools required:

- Drill
- Phillips Screw driver
- 3/8" wrench or socket
- 1/2" wrench

1. Mount the horn behind the dash using the lower left steering column bolt. (see photo)
2. Drill a 5/8" hole in the plastic dash board to the left of the steering column as shown.

3. Attach the ring terminals on the wire harness to the button switch with the provided screws.
4. Install the button in the 5/8" hole.
5. Attach the spade terminals that are nearest the switch to the horn.
6. Remove the cover from the wire distribution panel under the hood (3/8" wrench). Connect the provided wires as shown at right.  
red – second from left,  
black – second from right.
7. Replace distribution panel cover. Fasten wires away from steering shaft and shifter controls with provided zip ties.
